

# Rolling the Root Zone DNSSEC Key Signing Key *Lightning Talk*

Roy Arends | RIPE 73 | October 2016

# Motivation for this talk

- ⊙ ICANN is about to change an important configuration parameter in DNSSEC
- ⊙ Plan documents are available for your information
- ⊙ This is an update to KSK roll presentations given in the DNS WG meetings of RIPE 70, 71, and 72

# DNSSEC in the Root Zone

- ⊙ DNSSEC in the Root Zone is managed by:
  - ICANN, responsible for operating the root KSK
    - "signs the KSK & ZSK"
  - Verisign, responsible for operating the root ZSK
    - "signs the root zone"
  
- ⊙ The current root KSK was created in 2010
  - A 2048 bits, RSASHA256 key
    - These parameters do not change

# Why change the current Root KSK?

- ⊙ Good cryptographic hygiene
  - Secrets don't remain secret forever
- ⊙ Good operational hygiene
  - Have a plan, complete enough to execute
  - Exercise the plan under normal circumstances
- ⊙ Promised to do so in a policy statement in 2010
  - “Each RZ KSK will be scheduled to be rolled over through a key ceremony as required, or after 5 years of operation.”

# The KSK Roll Plan Documents

- ⦿ Available at: <https://www.icann.org/kskroll>
  - 2017 KSK Rollover Operational Implementation Plan
  - 2017 KSK Rollover Monitoring Plan
  - 2017 KSK Rollover Back Out Plan
  - 2017 KSK Rollover Systems Test Plan
  - 2017 KSK Rollover External Test Plan
  
- ⦿ We encourage interested folks to given them a read

# Dates to Watch

- ⦿ September 19, 2017
  - The root zone DNSKEY set will increase to 1414 bytes for 20 days, prior to that date 1139 bytes has been the high water mark
- ⦿ **October 11, 2017**
  - The root zone DNSKEY set will *only* be signed by the new KSK
  - If preparations haven't been made, trouble will ensue
- ⦿ January 11, 2018
  - The root zone DNSKEY set will increase to 1425 bytes for 20 days

# Tools & Testbeds

- ⊙ We are working with DNS software and tool developers and distributors
  - Management/troubleshooting aids
  - Updates of bundled keys
- ⊙ Testbeds for Code Developers
  - Automated updates: <http://keyroll.systems/>
  - Root zone model: <https://www.toot-servers.net/>
- ⊙ Testbeds for Service Operators
  - I.e., using "off-the-shelf" parameters
  - Planned for end-of-2016
