

# **Are We There Yet? IPv6 as Related to GDP per Capita**

Alain Durand, October 26<sup>th</sup> 2016

# Questions for this Study:

## I. Where are we across the globe with IPv6 adoption?

- a. Is IPv6 deployed uniformly?
- b. Is there a rich country/poor country divide?

## II. What can IPv6 adoption numbers tell us about IPv6 as a replacement for IPv4?

- a. How to best measure IPv6 adoption? Penetration or usage?  
How do they differ?
- b. Are we there yet? (As in, can we retire IPv4?)

# Methodology

## I. Find data about IPv6 adoption per country

- Penetration data
- Bandwidth data

## II. Compare countries

- Use GDP per capita to characterize countries
  - Gross Domestic Product divided by population size
  - Metric widely used by economists to compare countries
- Look at outliers

## III. Assessment of the data

- Are the various data set telling the same story?
- Are we there yet?

**Find data about  
IPv6 adoption per country**

# Data Sources

## I. APNIC/Geoff Huston IPv6 penetration study

- Uses Google ads
- Provide a proxy\* for measuring penetration, i.e. the potential of using IPv6 per country

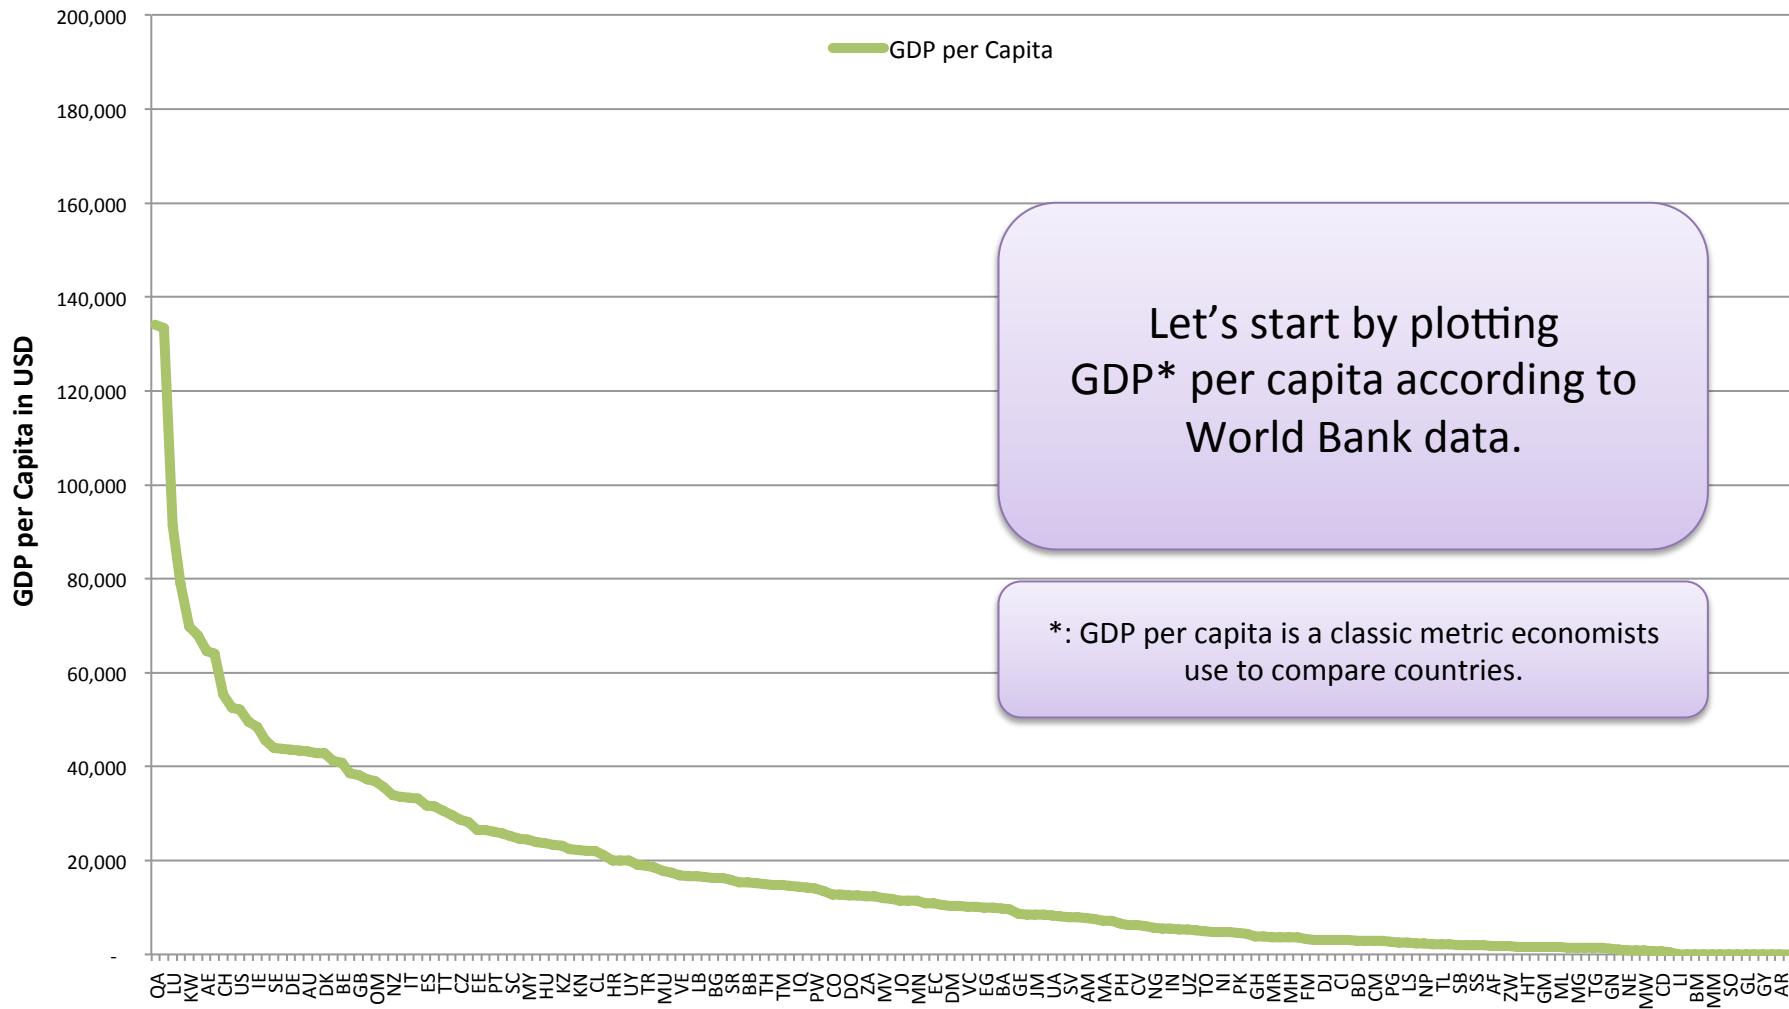

## II. AKAMAI State of the Internet study

- Measure hits over IPv6 on Akamai caches
- Provide a proxy\* for measuring bandwidth, i.e. the usage of IPv6 per country

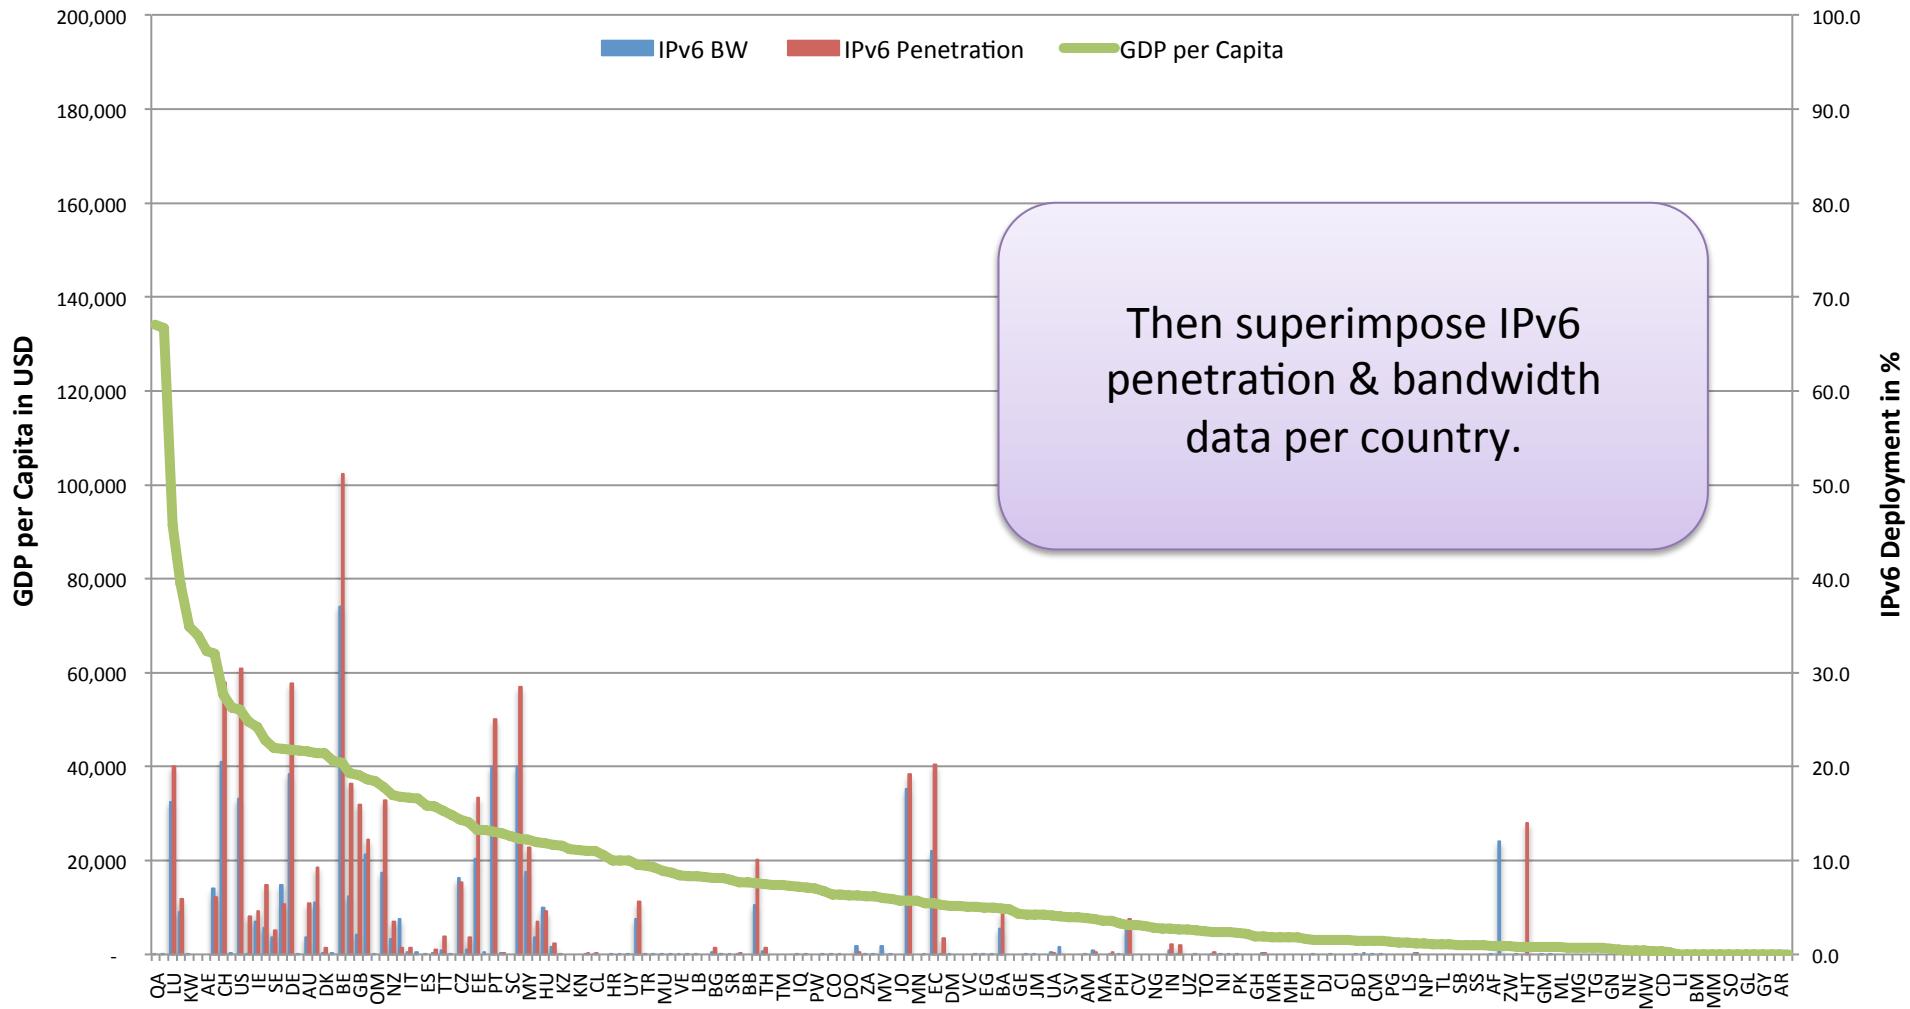

\* Proxy: a figure that can be used to represent the value of something in a calculation

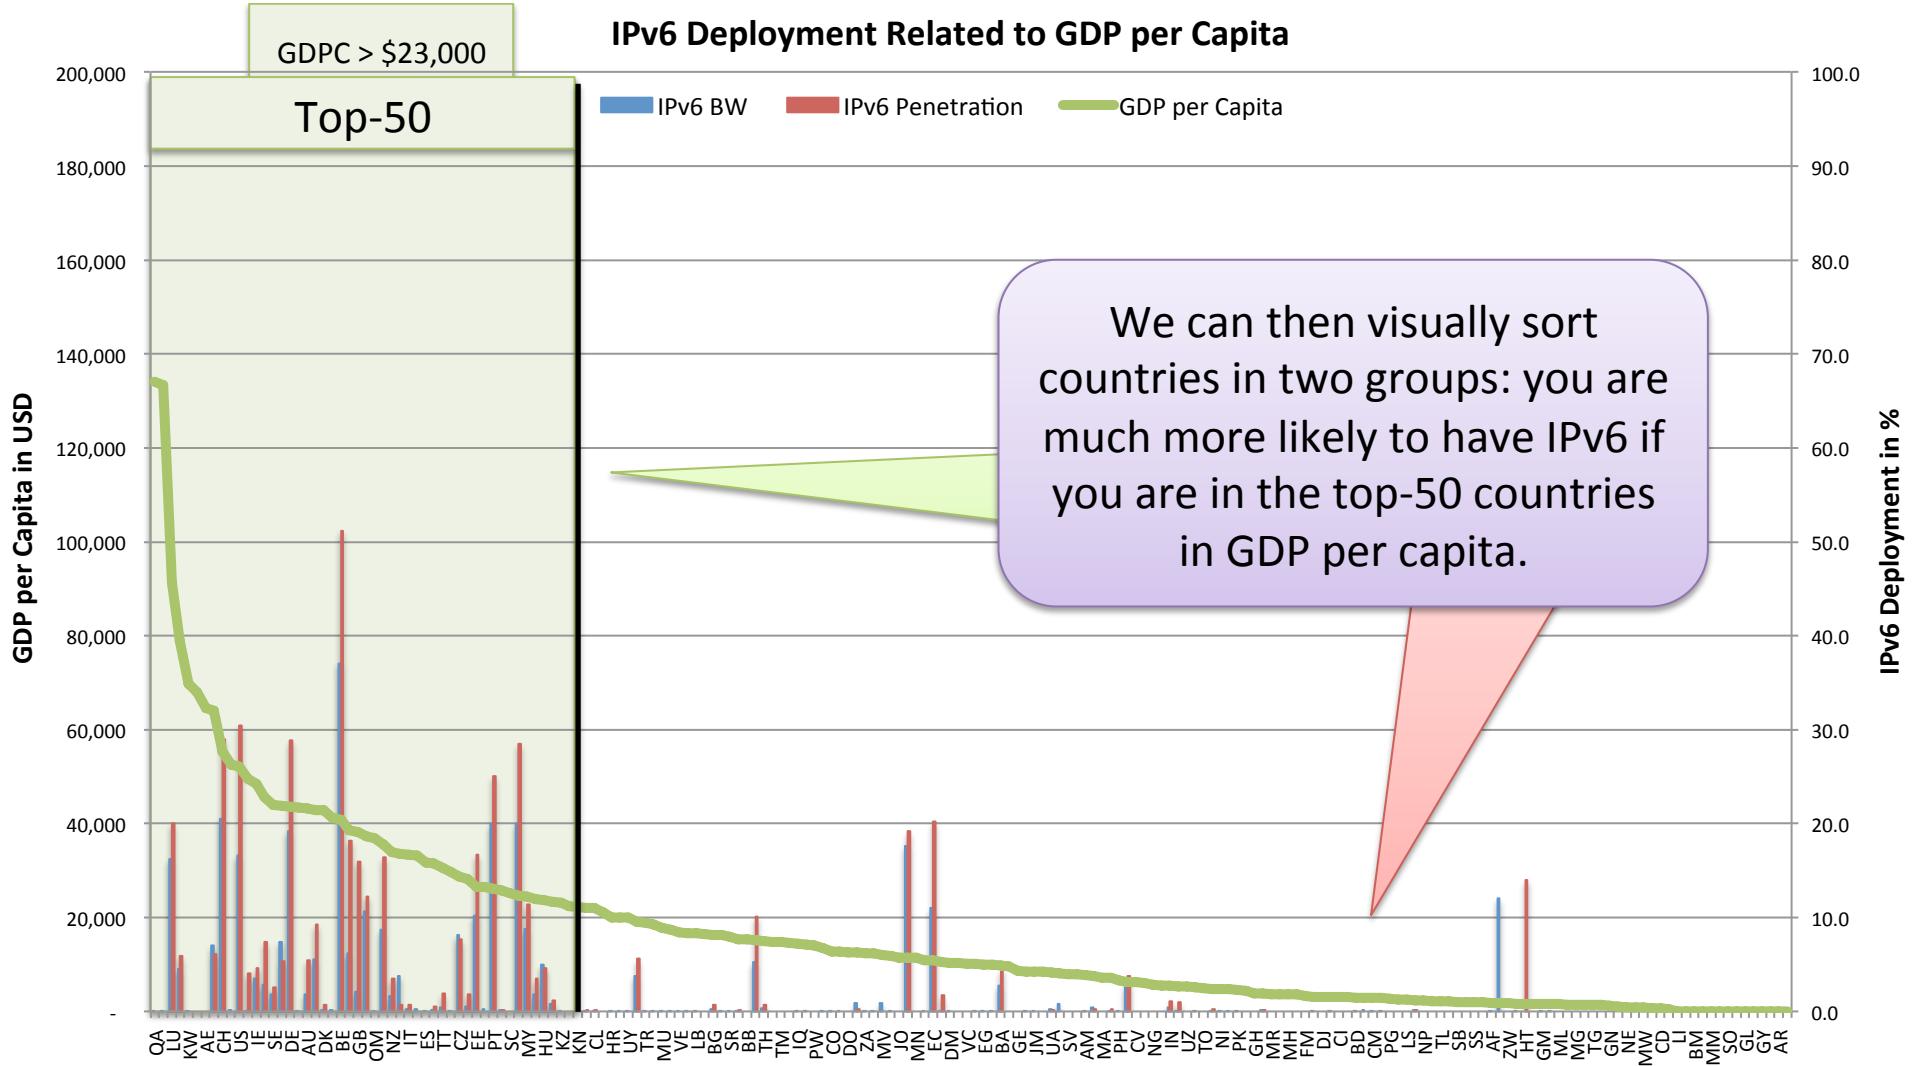

**Where are we across the globe  
with IPv6 adoption?**

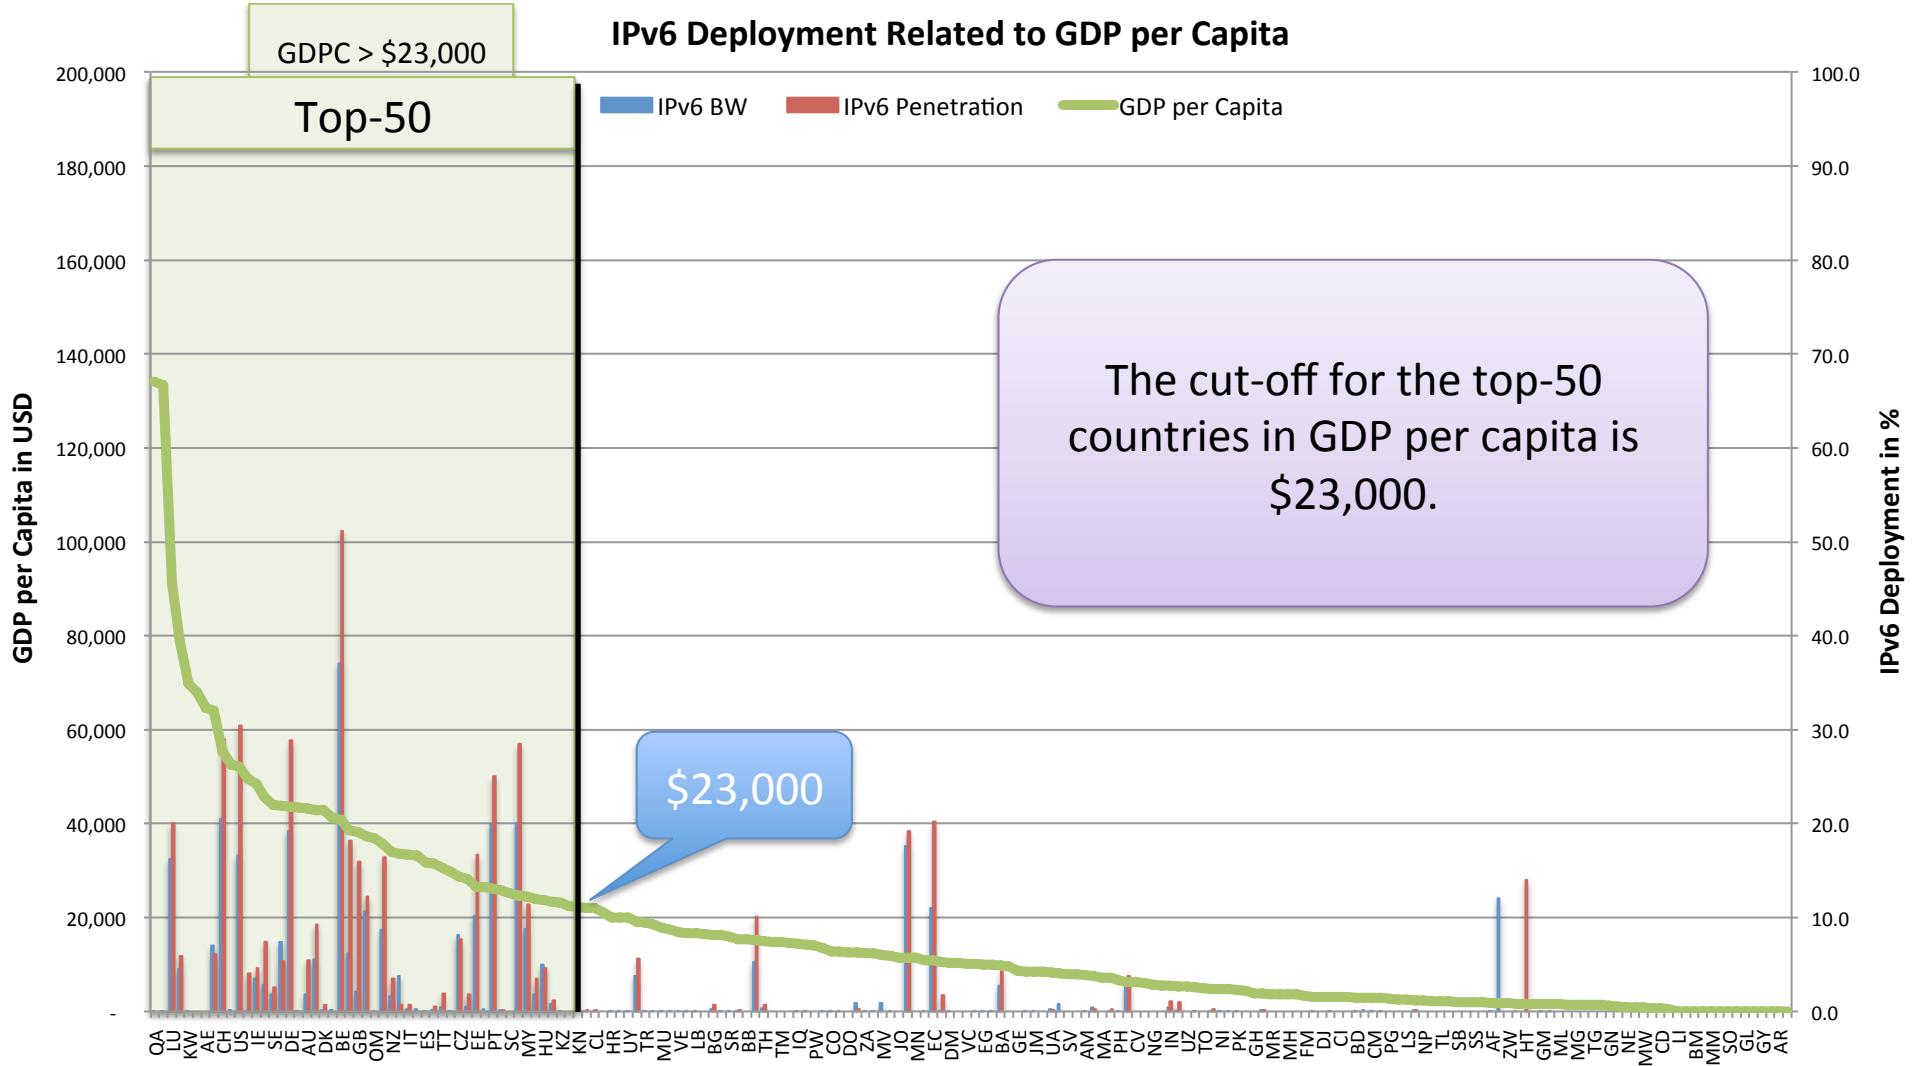

## IPv6 Deployment Related to GDP per Capita

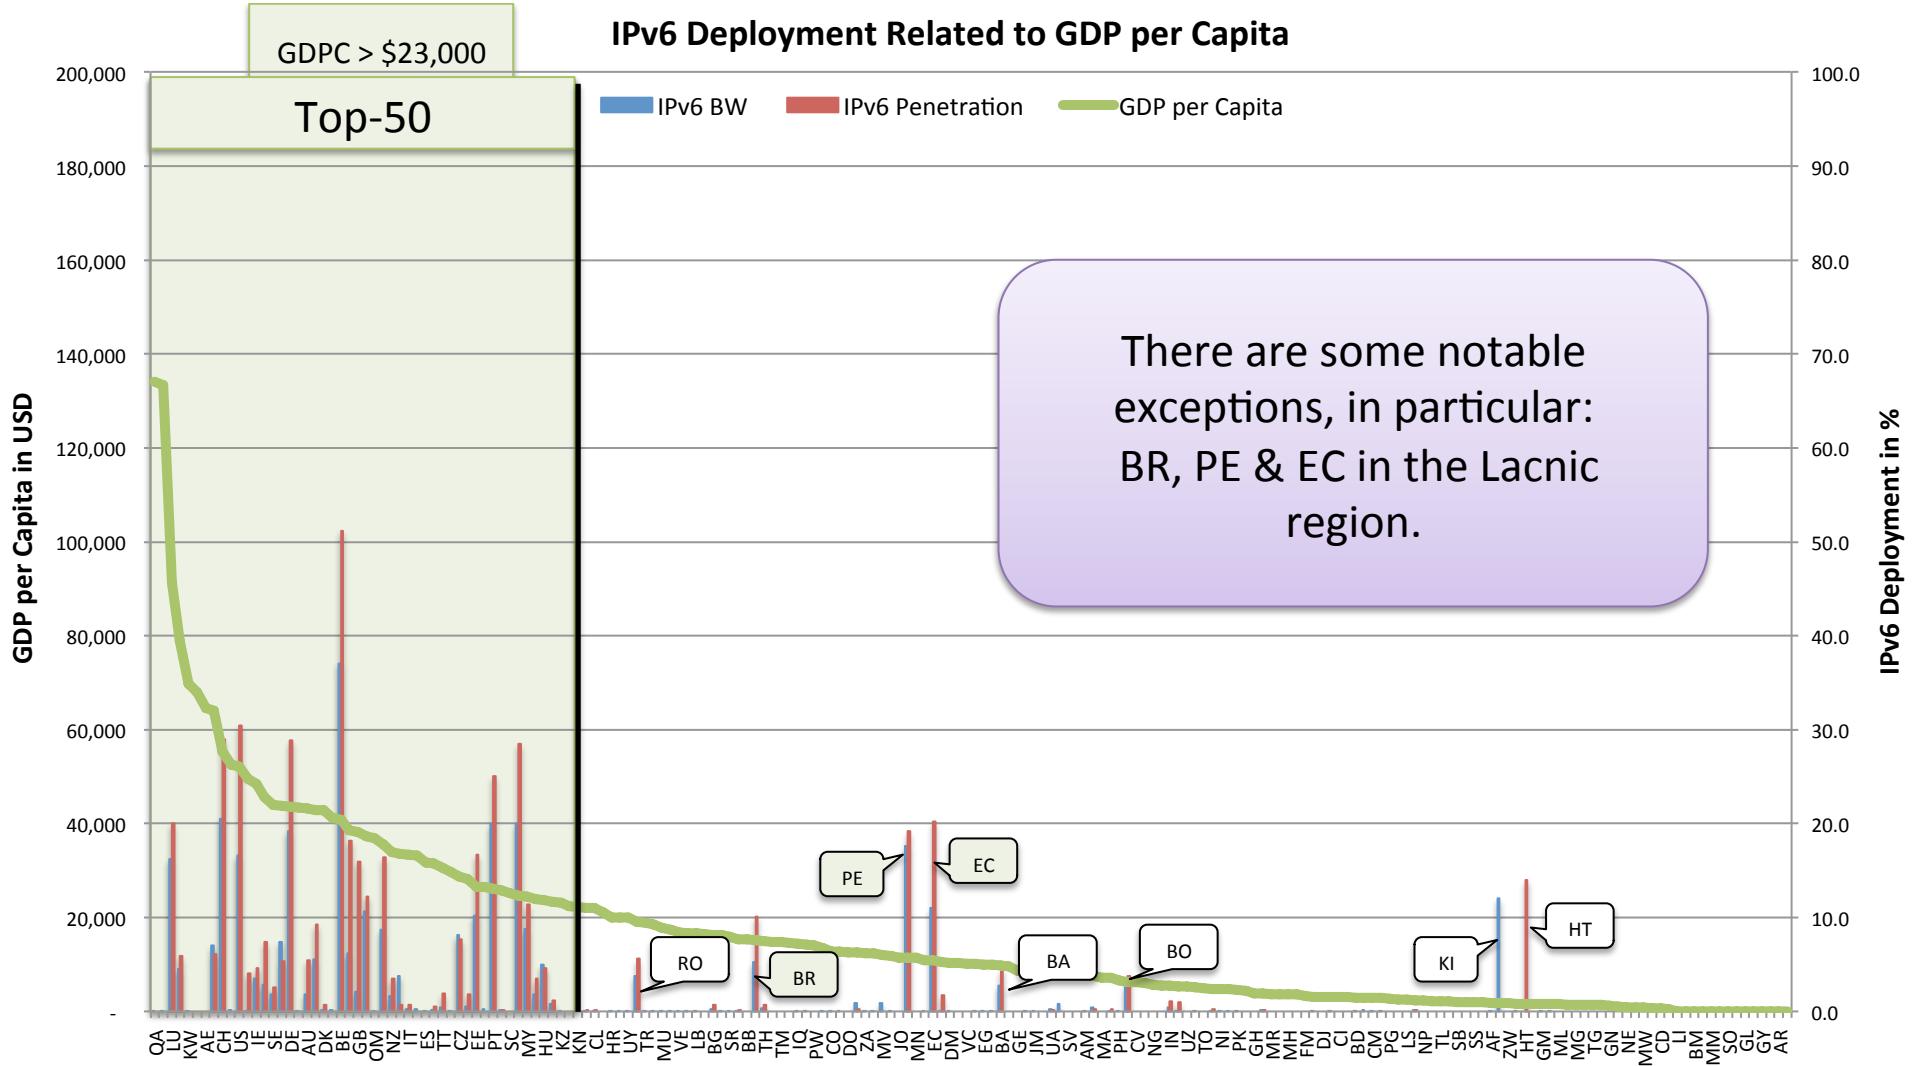

## IPv6 Deployment Related to GDP per Capita

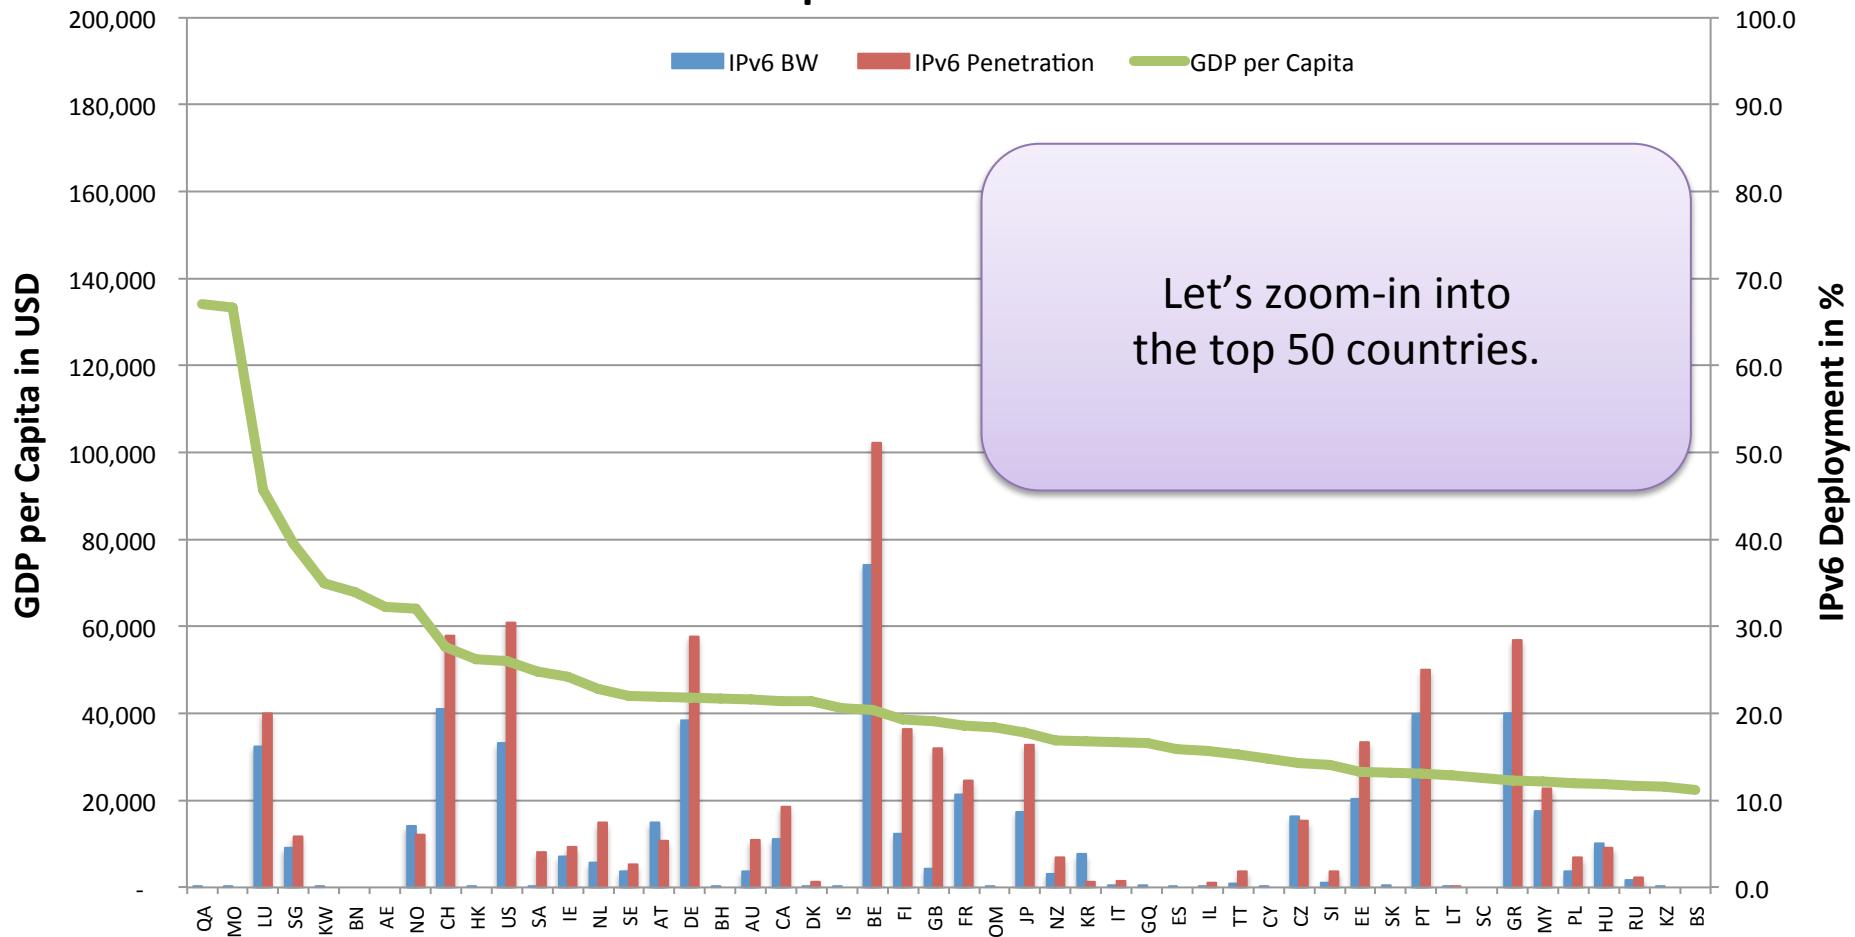

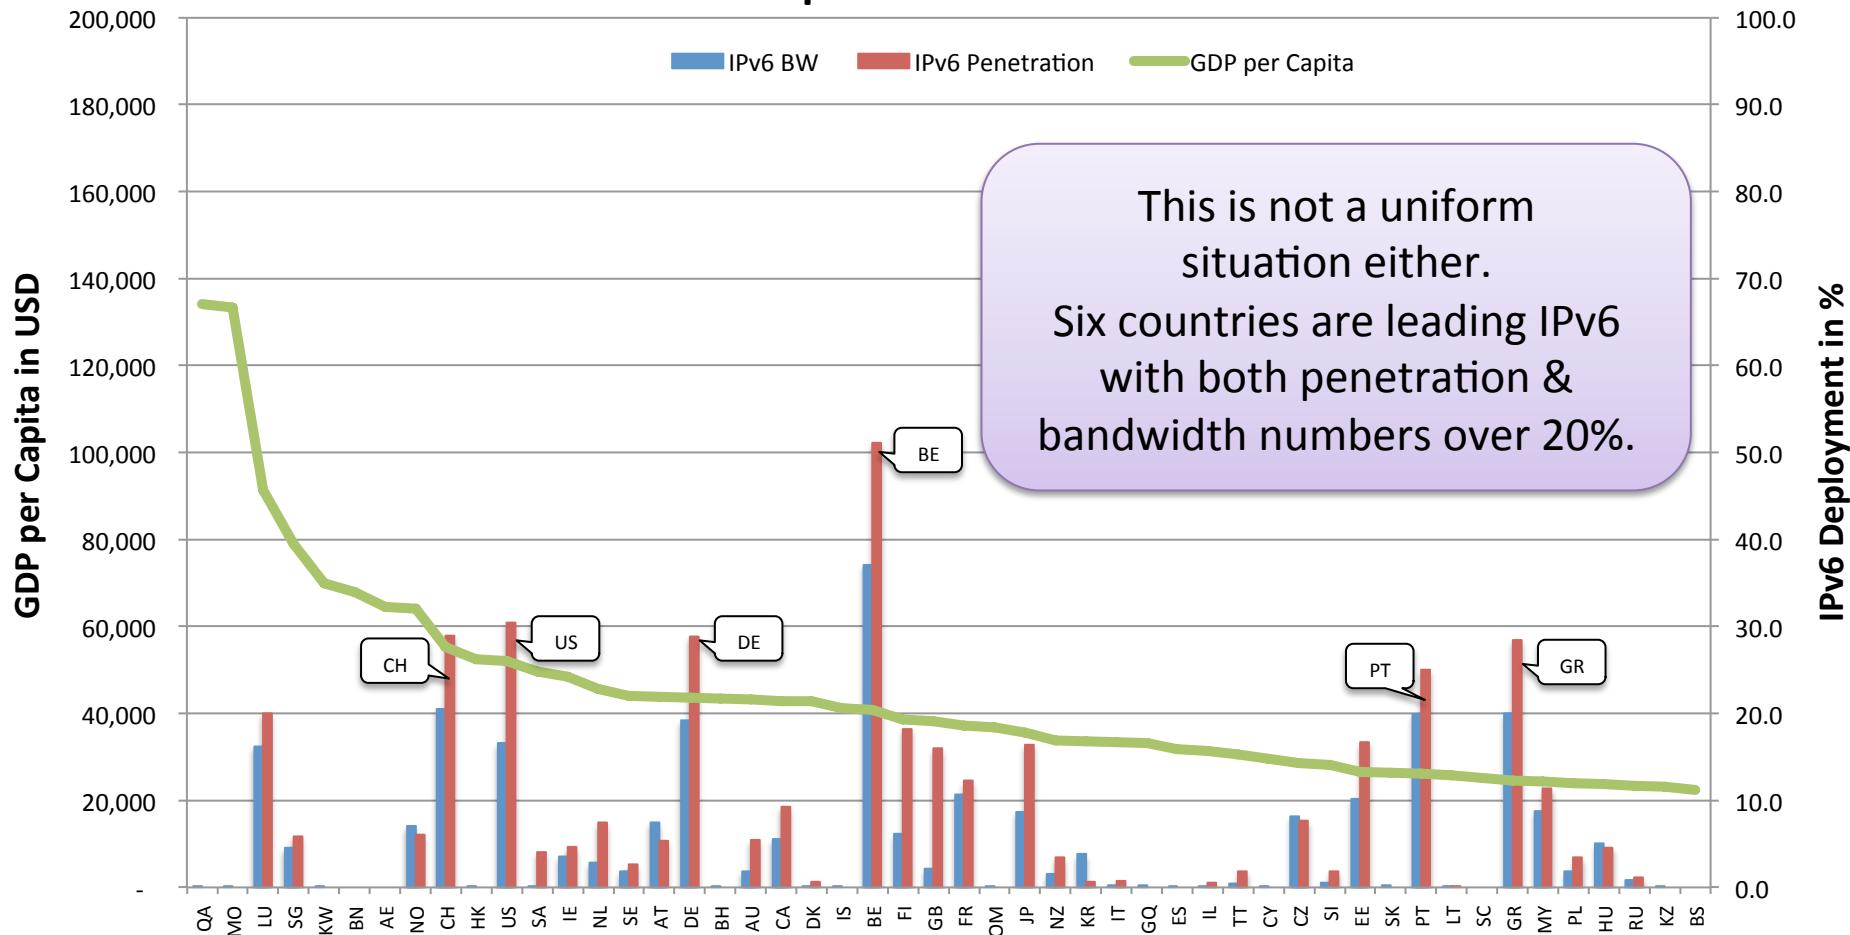

## IPv6 Deployment Related to GDP per Capita Top-50 Countries

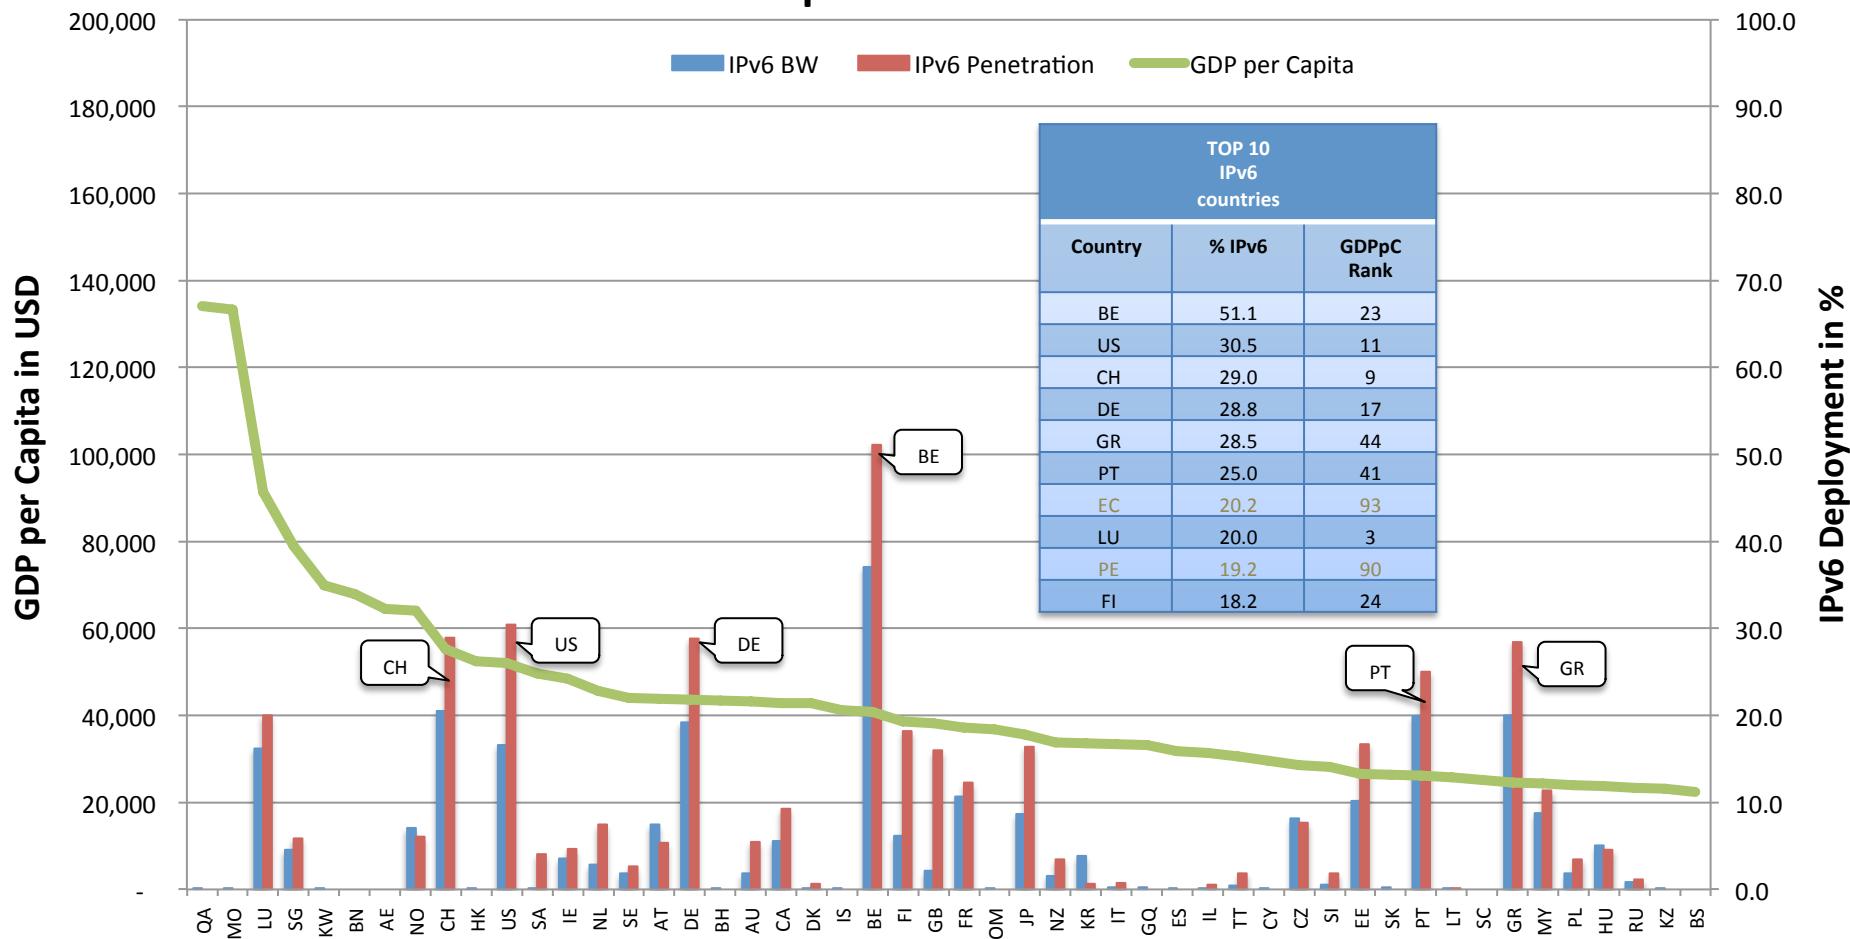

## IPv6 Deployment Related to GDP per Capita Top-50 Countries

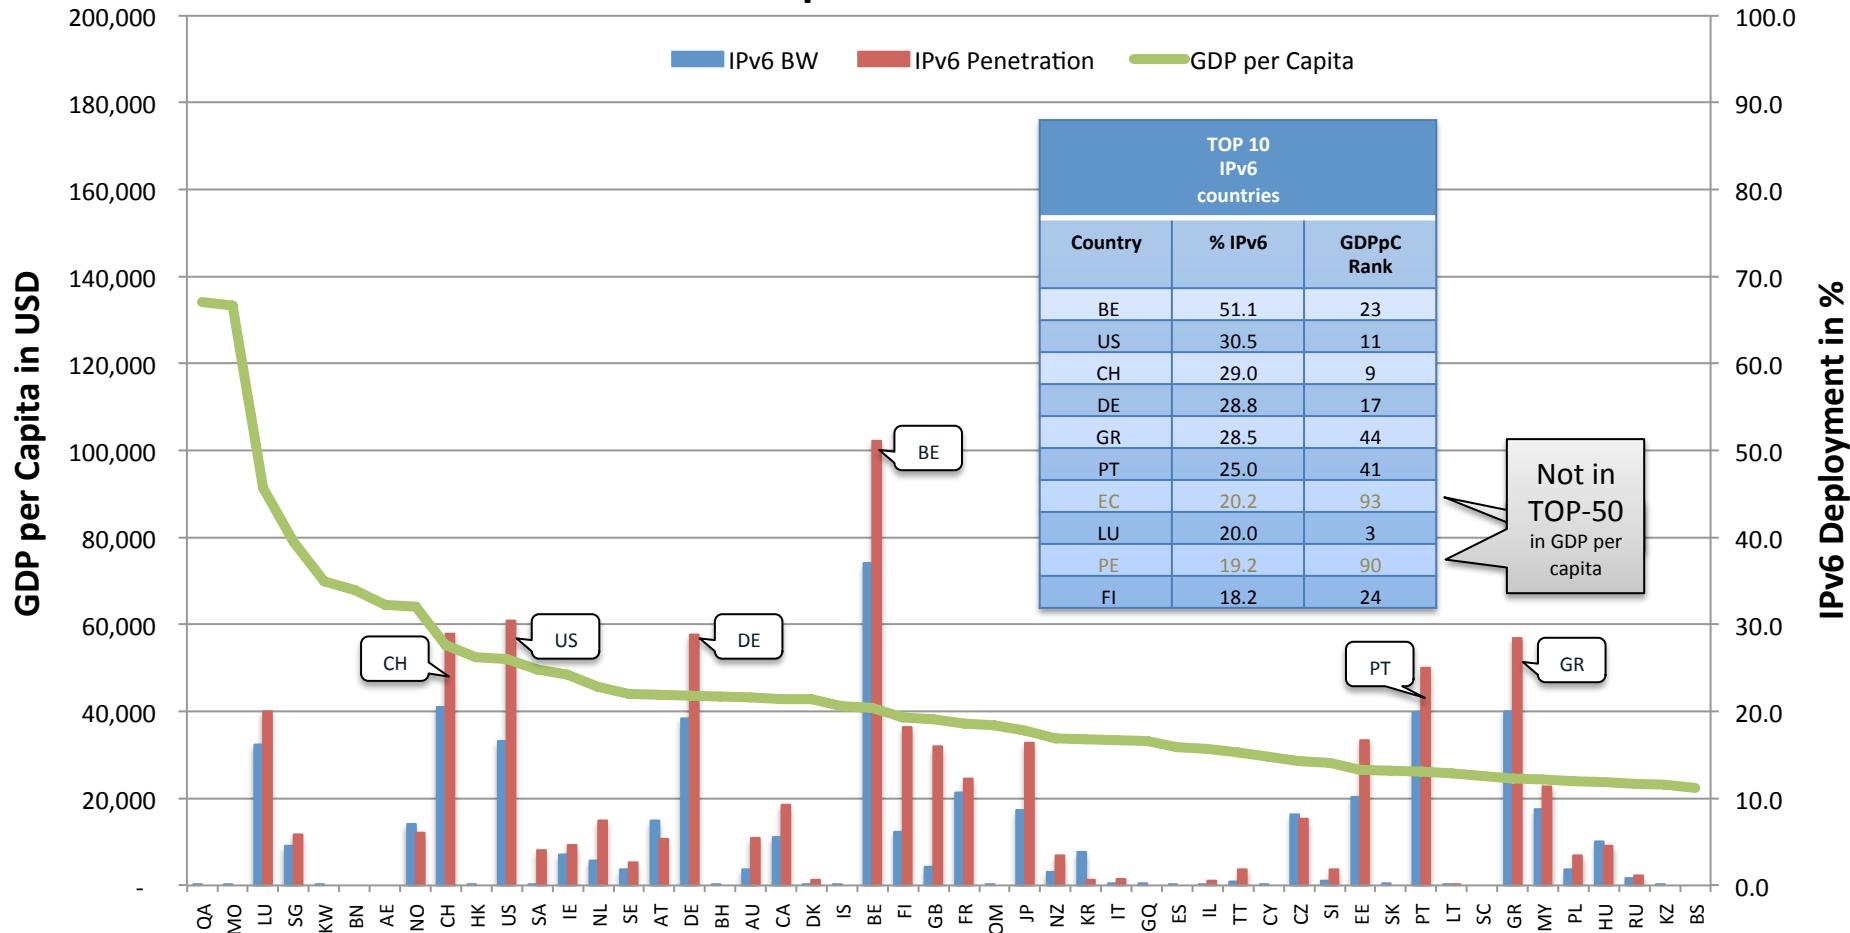

## IPv6 Deployment Related to GDP per Capita

### Top-50 Countries

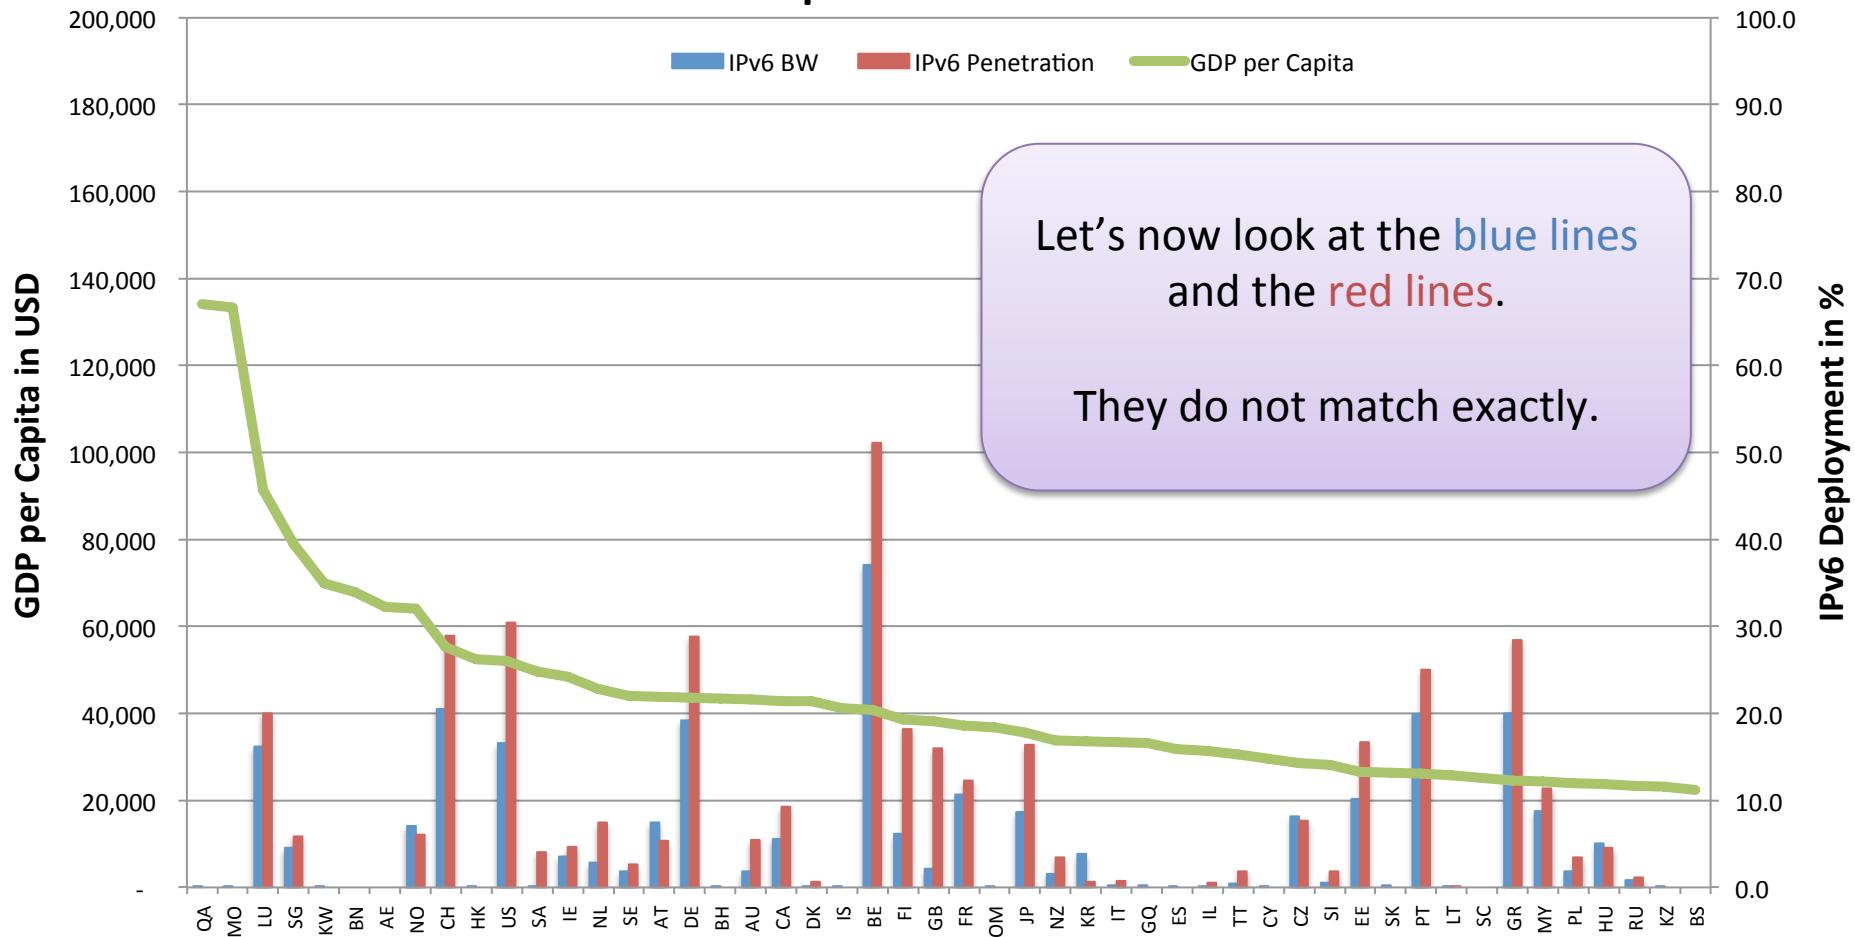

## IPv6 Deployment Related to GDP per Capita

### Top-50 Countries

## **Assessment of the data**

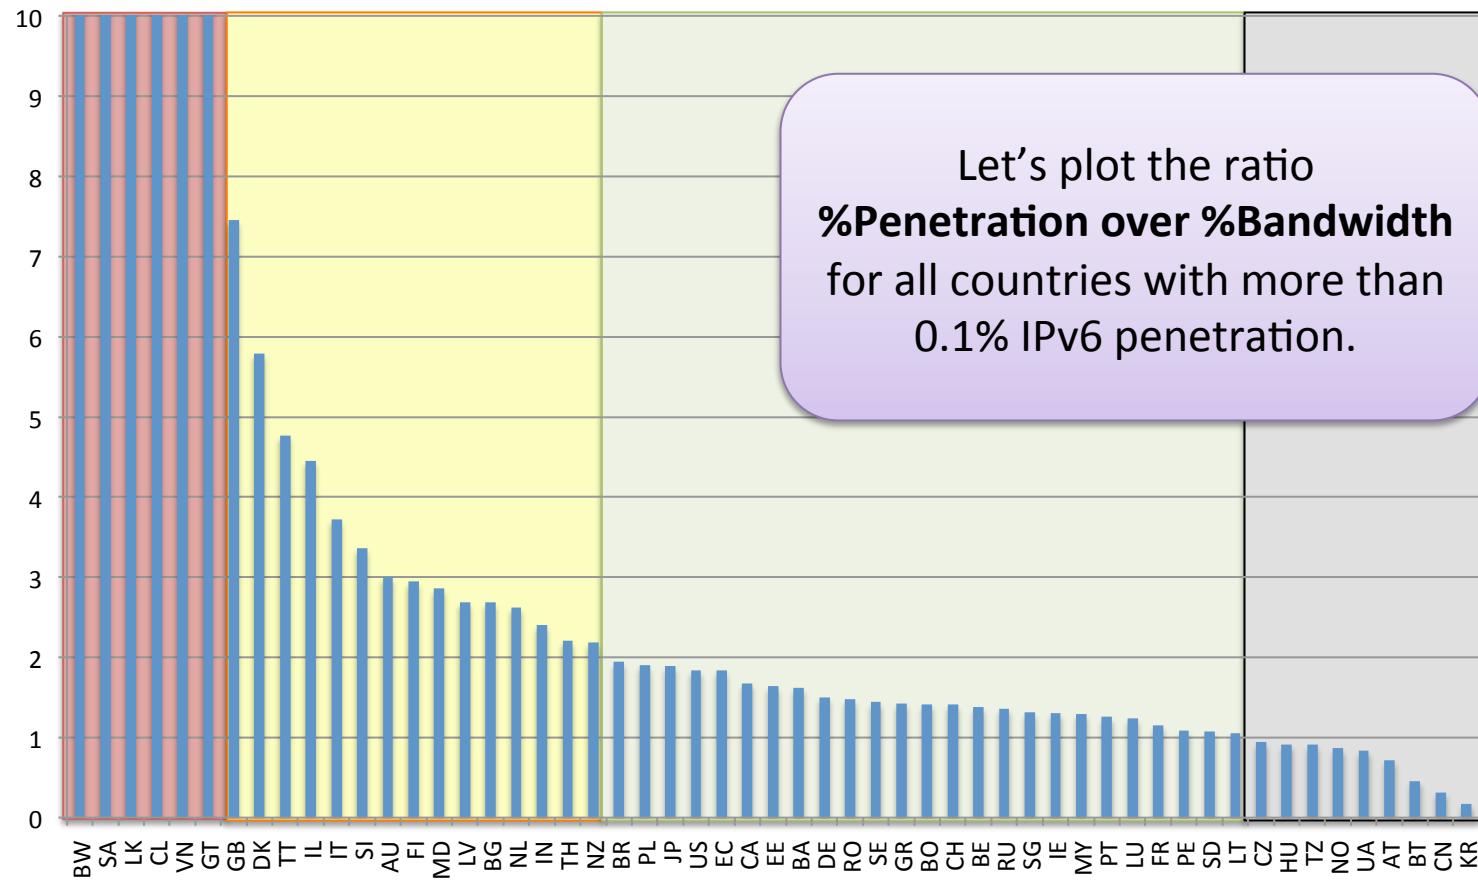

## IPv6 Deployment Related to GDP per Capita Top-50 Countries

Let's now look at the blue lines  
and the red lines.

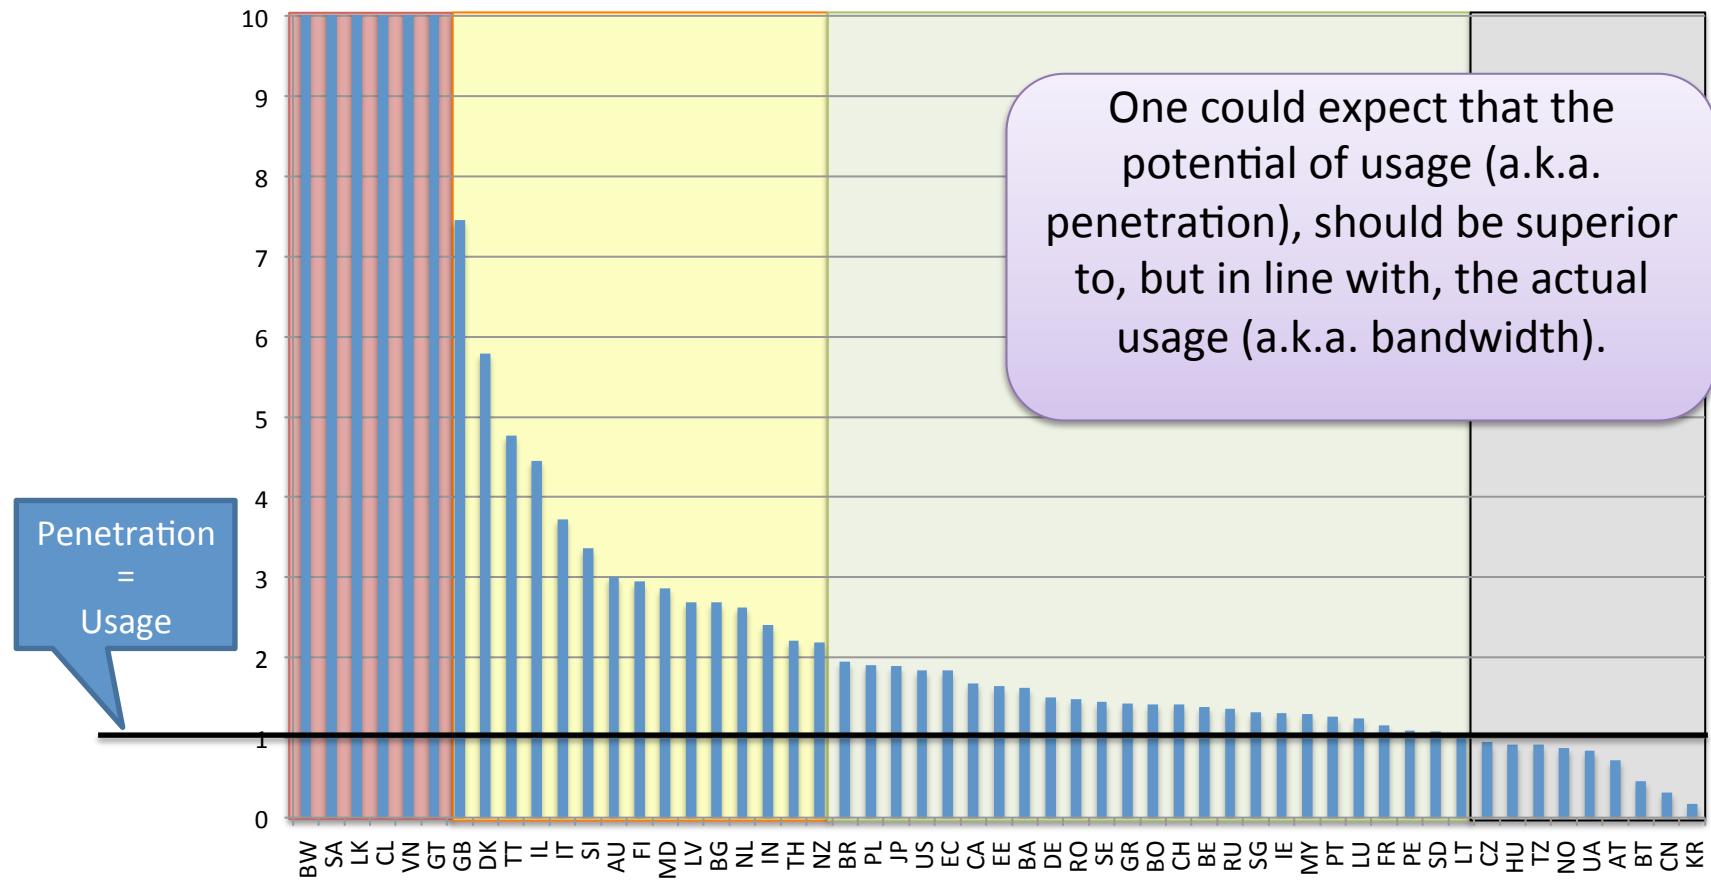

They do not match exactly.

## IPv6 Penetration vs Usage: %Penetration / %Bandwidth

Let's plot the ratio  
**%Penetration over %Bandwidth**  
for all countries with more than  
0.1% IPv6 penetration.

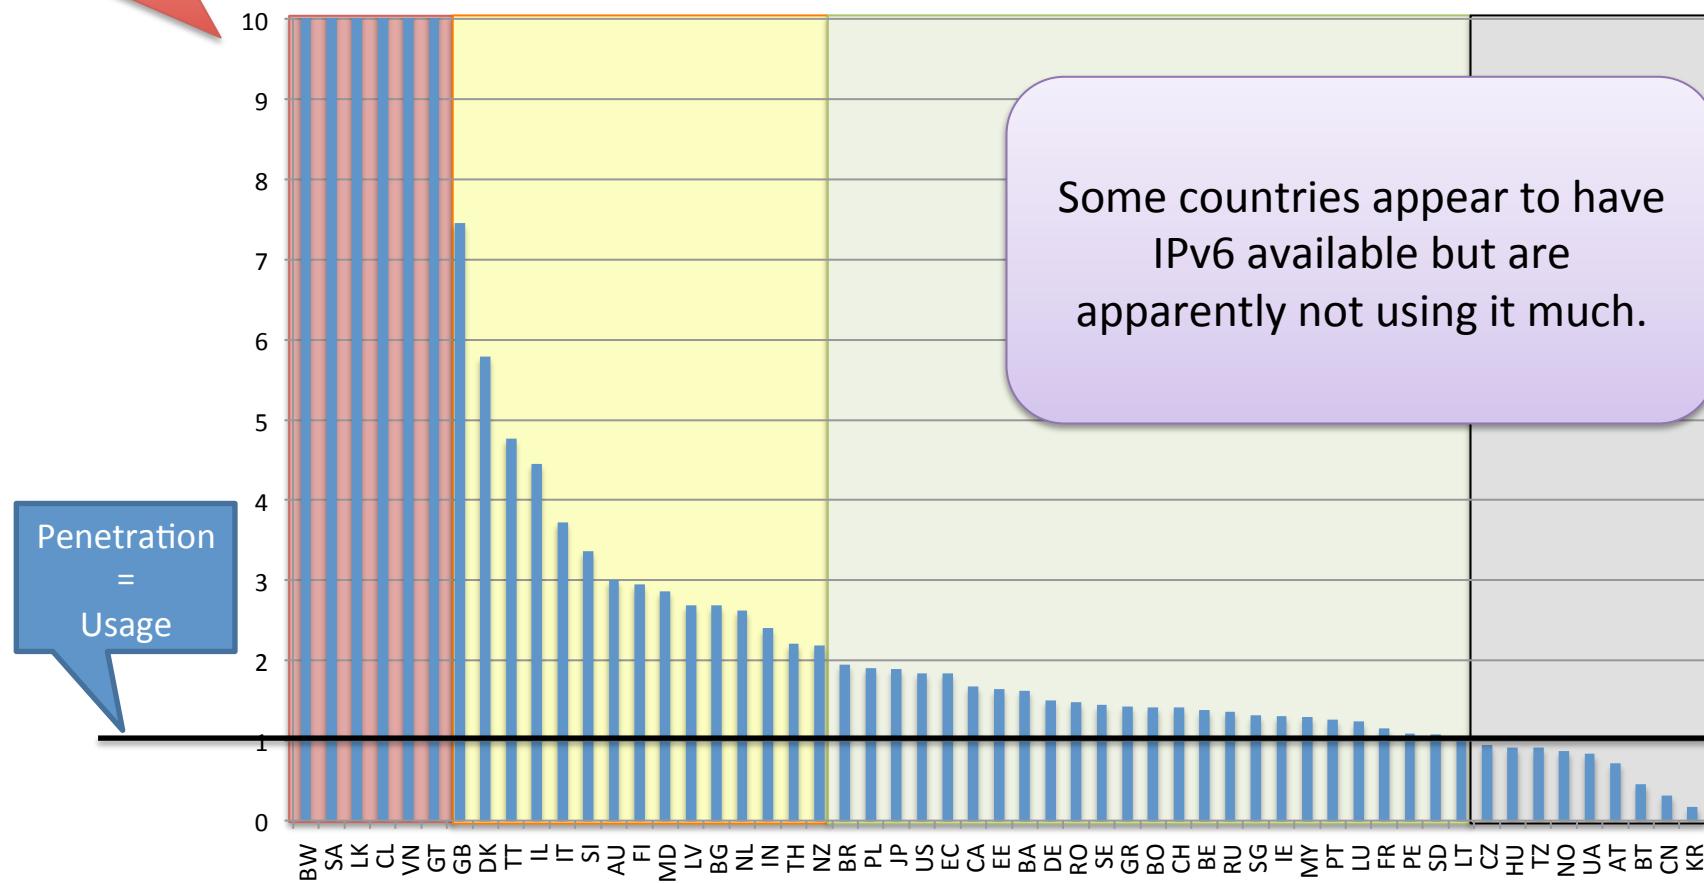

## IPv6 Penetration vs Usage: %Penetration / %Bandwidth

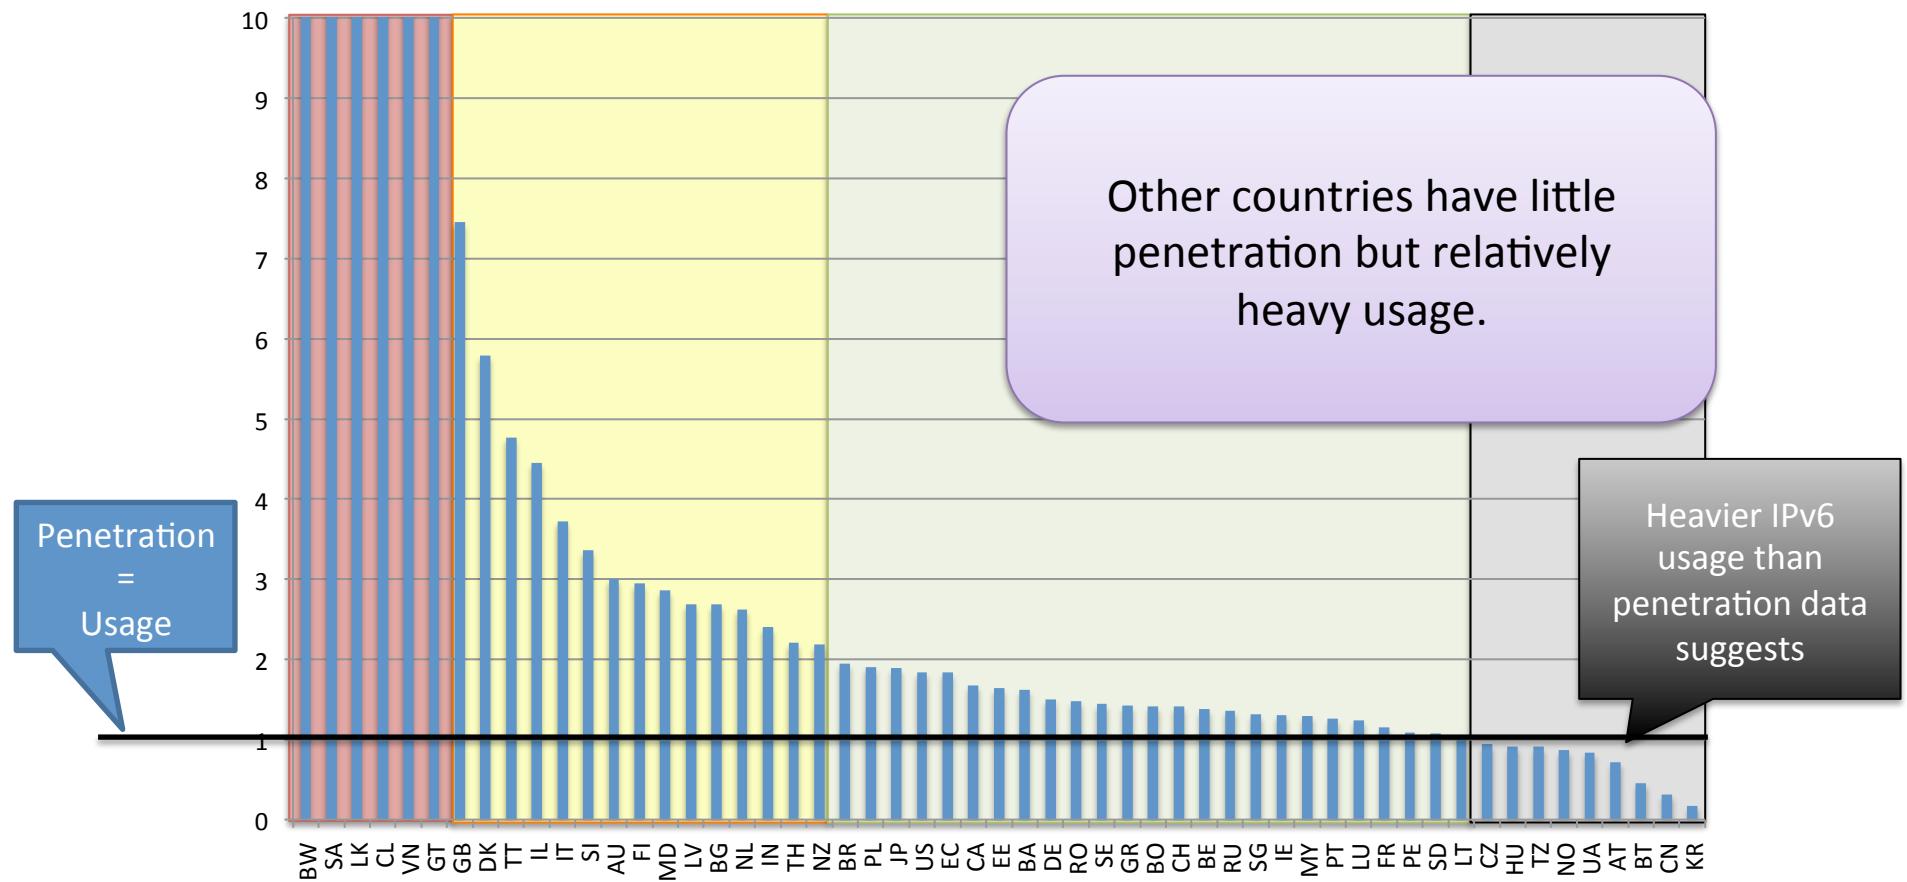

Off the chart:  
IPv6 is available but not  
used: x15 to x900

## IPv6 Penetration vs Usage:

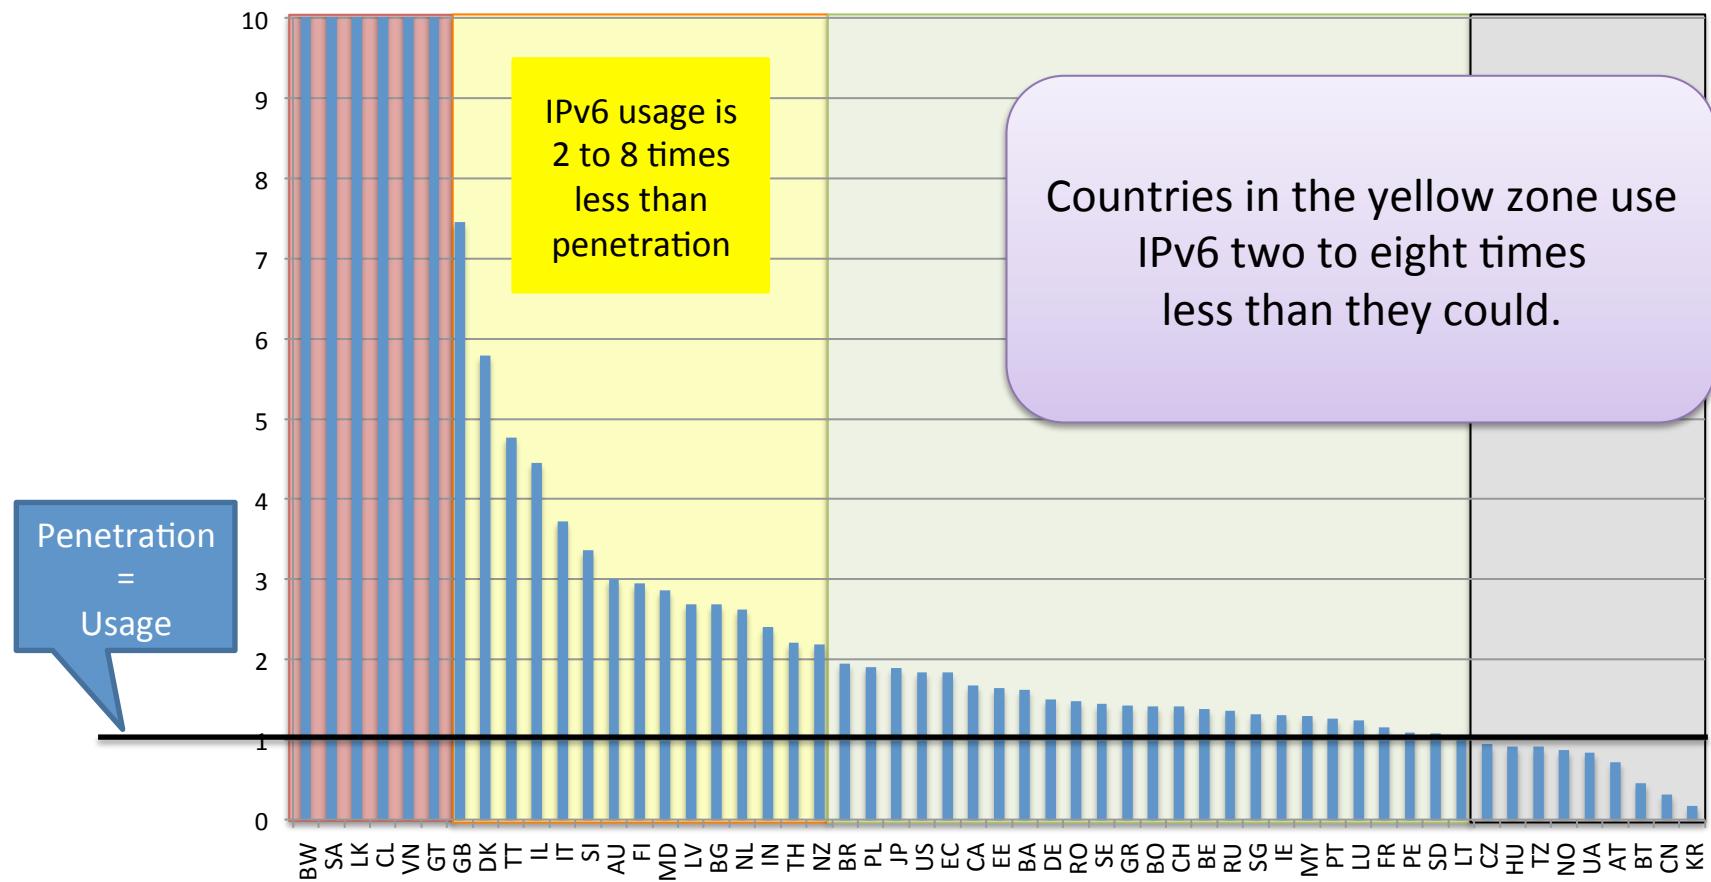

### %Penetration / %Bandwidth

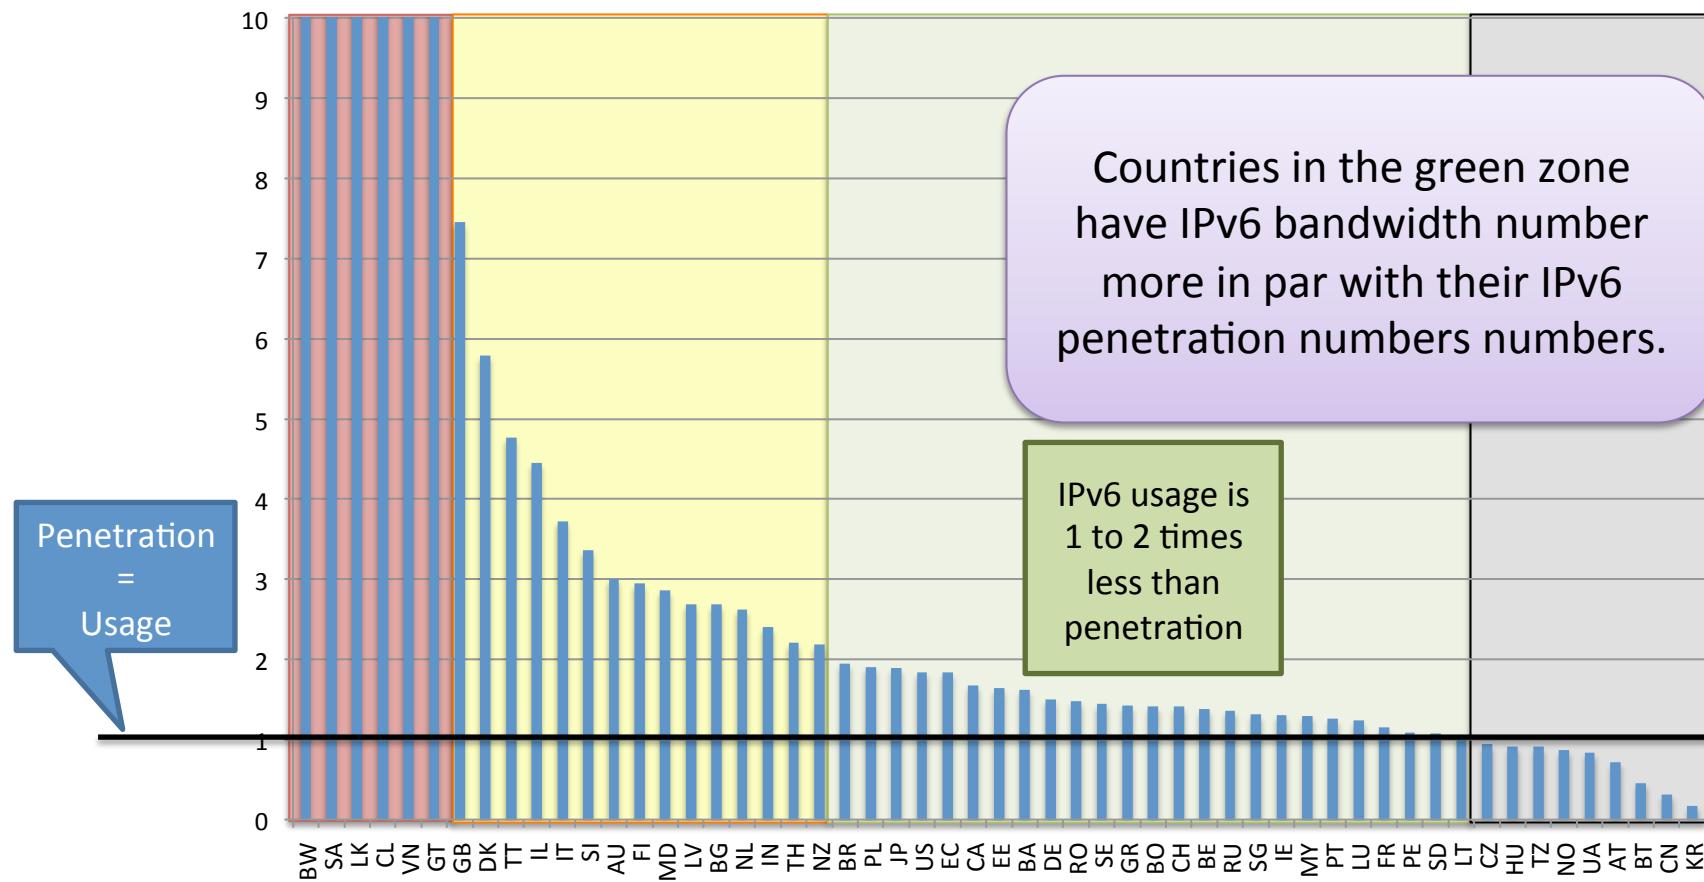

## IPv6 Penetration vs Usage: %Penetration / %Bandwidth

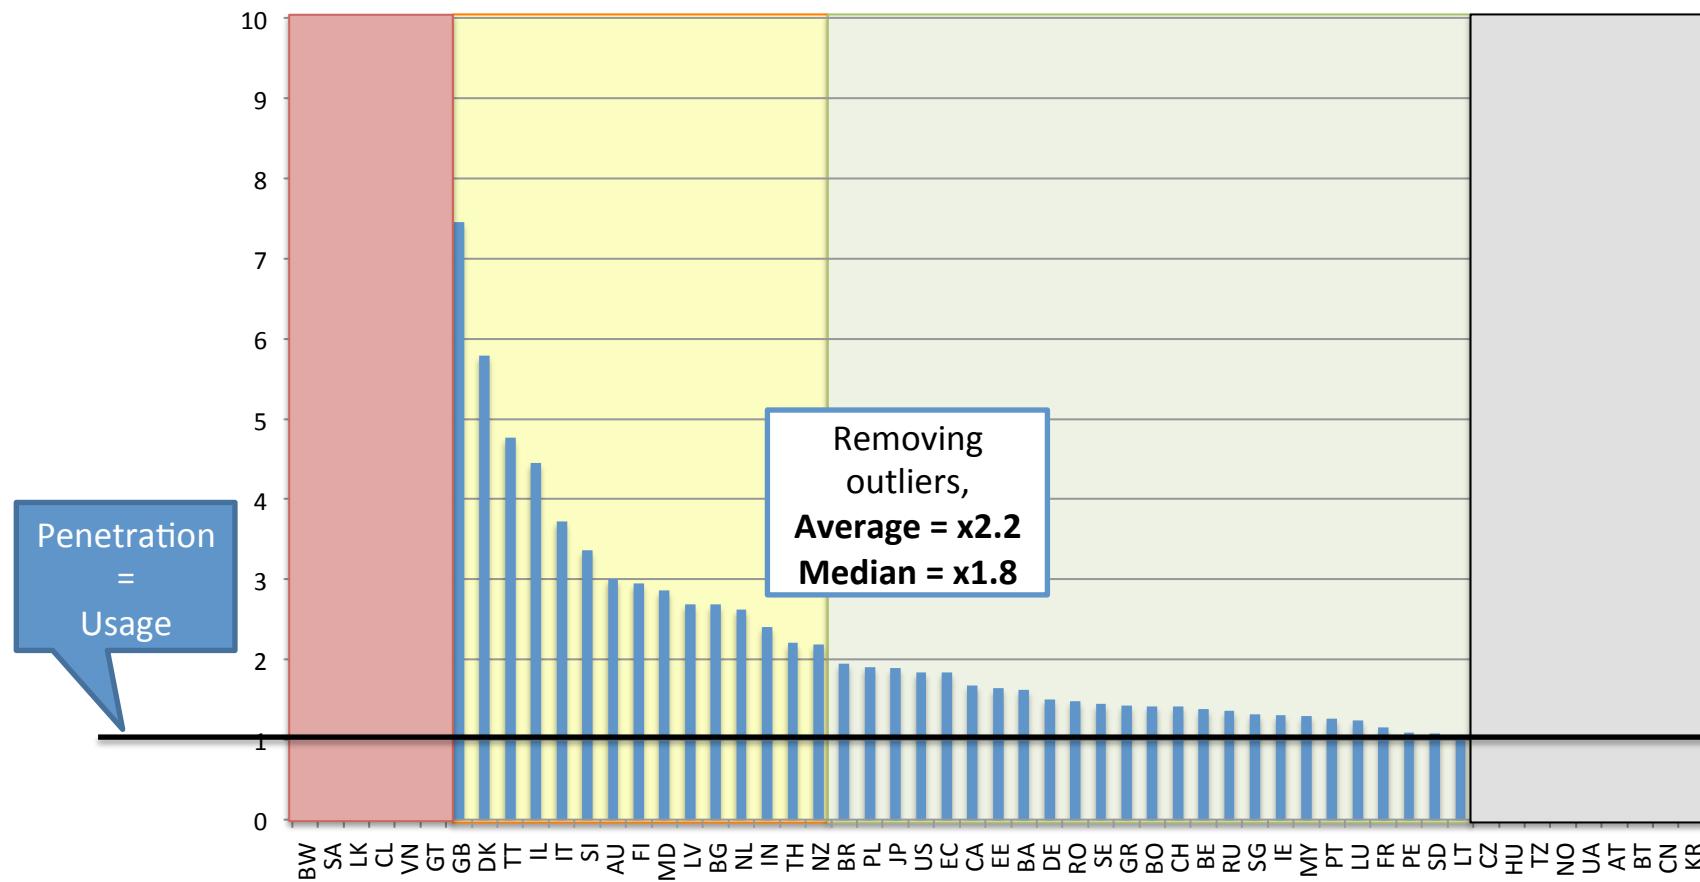

## IPv6 Penetration vs Usage: %Penetration / %Bandwidth

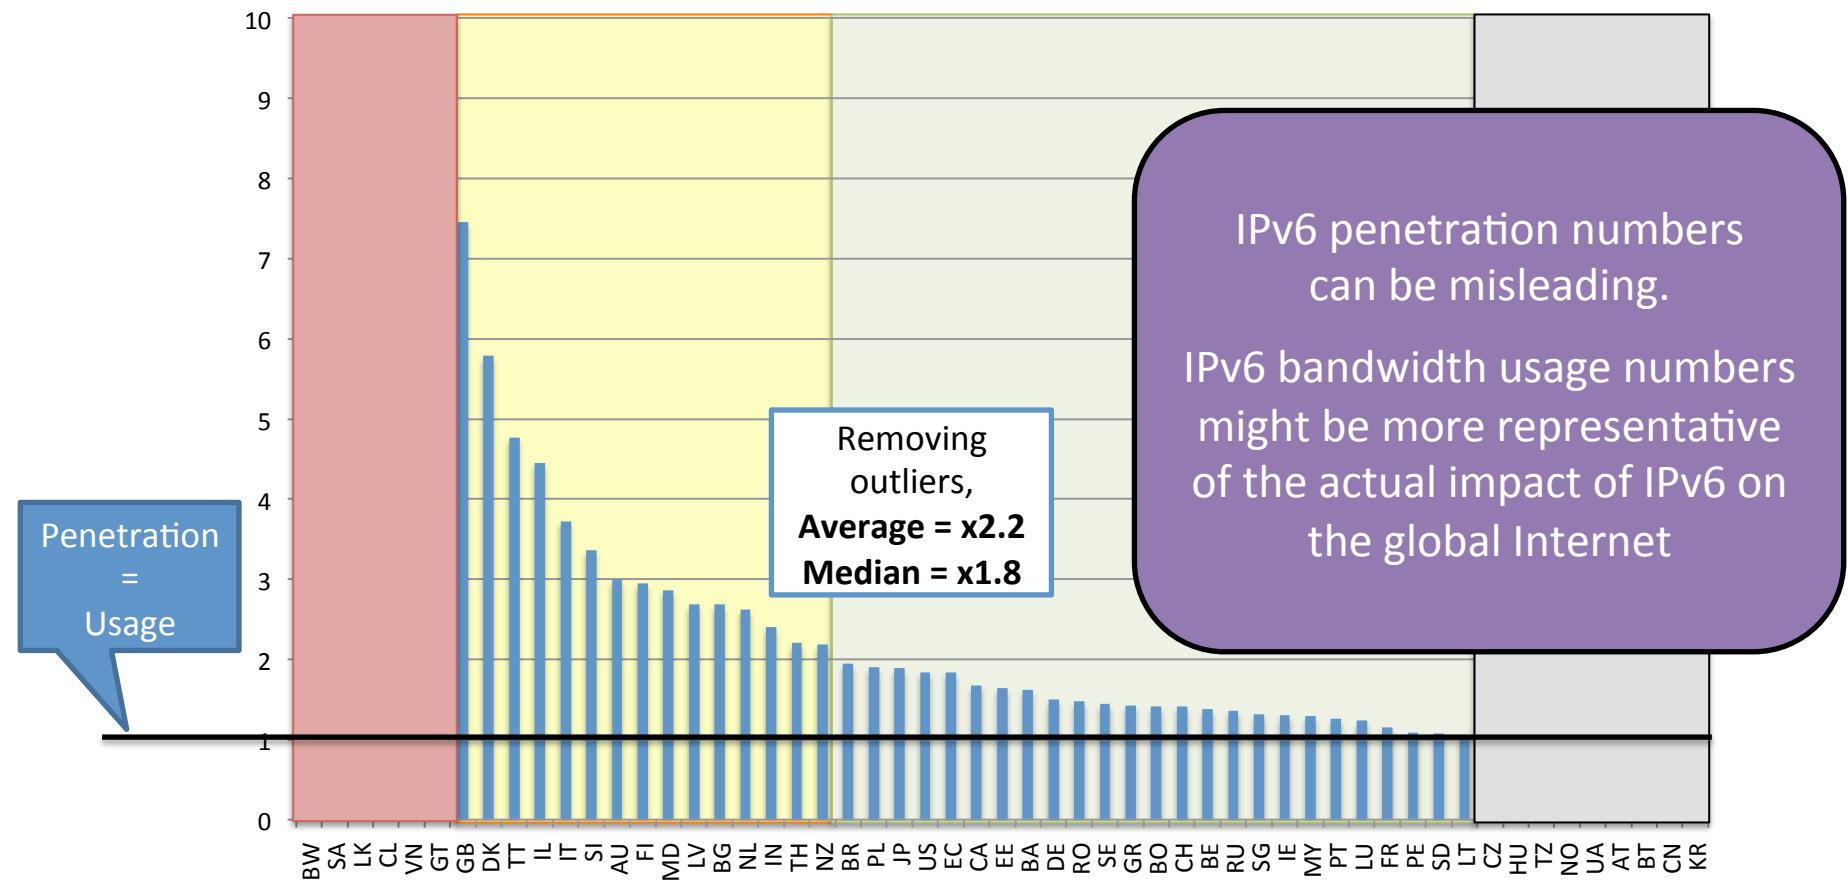

## IPv6 Penetration vs Usage: %Penetration / %Bandwidth

## IPv6 Penetration vs Usage: %Penetration / %Bandwidth

## IPv6 Penetration vs Usage: %Penetration / %Bandwidth

# Are We There Yet?

A.k.a. Is IPv6 a viable replacement for IPv4?

# **Are We There Yet?**

A.k.a. Is IPv6 a viable replacement for IPv4?

## **I. No**

## **II. There are positive signs**

- Six countries have both penetration and bandwidth numbers over 20%.

## **III. IPv4 will still be very relevant for a long while**

- The large number of countries with low GDP per capita that have very little or no IPv6 should tempers enthusiasm.

# **Raw Data**
